OLUWADARE TOBI JAYEOLA Junior DevOps Engineer | Cloud Infrastructure & Automation | AI-Enabled Platform Engineering Nigeria (Remote) | +2347067158165 | jayeolaoluwadamilare@gmail.com | LinkedIn Professional Summary Junior DevOps Engineer with hands-on experience building and operating AWS cloud infrastructure, CI/CD pipelines, and containerized application platforms. Proven track record reducing operational overhead through infrastructure-as-code, automation, and observability — including a 40%+ reduction in MTTR through automated alerting. Passionate about applying DevOps and cloud engineering in mission-driven environments, with active exposure to Generative AI and Machine Learning. Strong technical documentation, asynchronous communication, and remote collaboration skills. Seeking to contribute directly to AI-powered platform development in a small, fast-moving, impact-focused team.

Core Technical Skills Cloud Infrastructure: Amazon Web Services — EC2, S3, VPC, IAM, RDS, CloudWatch, ECS, EKS, CloudFormation; Azure (VMs, networking); GCP (Compute Engine) Infrastructure as Code: Terraform, AWS CloudFormation, Ansible — multi-tier environment provisioning, networking, compute, security CI/CD & Automation: GitHub Actions, Jenkins, GitLab CI, CircleCI — build, test, containerize, deploy pipelines; environment provisioning automation Containers & Orchestration: Docker, Kubernetes, Amazon ECS, Amazon EKS — microservices containerization, orchestration, deployment strategies Observability & Monitoring: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS CloudWatch, Datadog — metrics, centralized logging, alerting Programming & Scripting: Python (automation scripts, deployment workflows), Bash, Node.js, Java — production workflow automation Databases: MySQL, Amazon RDS, DynamoDB, NoSQL — relational and non-relational data fundamentals Security & Networking: IAM policy management, VPC, Security Groups, Network ACLs, WAF, secrets management, security hardening, vulnerability fundamentals Developer Tooling: Git, Jira (sprint planning, backlog, CI/CD issue tracking), Linux (Ubuntu), technical documentation, runbooks AI & Innovation: AWS Generative AI, 3MTT Data Science/Machine Learning — AI-enabled platform context and fundamentals Professional Experience DevOps Engineer / Cloud Engineer Trainee | Ekiti MSME ICT Hub | Aug 2025 – Jan 2026 Cloud infrastructure & IaC: Automated provisioning of multi-tier AWS environments using Terraform and CloudFormation — configuring VPC networking, EC2 compute, IAM policies, Security Groups, and S3 storage. Reduced manual configuration effort and deployment risk, delivering consistent, repeatable infrastructure across environments. CI/CD pipeline engineering: Designed and maintained automated pipelines using Jenkins and GitHub Actions covering build, test, containerization, and deployment stages — improving release speed and deployment consistency for cloud-based applications. Observability & incident response: Implemented centralized metrics, logging, and alerting using Prometheus, Grafana, ELK Stack, and AWS CloudWatch. Achieved 40%+ reduction in Mean Time to Resolution (MTTR) through automated alert routing and structured incident triage workflows. Containerization & orchestration: Containerized and orchestrated microservices using Docker and Kubernetes (ECS/EKS) — supporting scalable, portable deployments with consistent build and release workflows across environments. Application automation: Developed Python scripts for automated system configuration, deployment workflows, and operational task automation — reducing repetitive manual engineering effort across the team. Linux systems administration: Administered Ubuntu servers including user management, security hardening, patching, and performance monitoring — maintaining system reliability and security compliance across cloud-hosted environments. Secrets & security management: Configured IAM least-privilege policies, VPC access controls, Network ACLs, and applied security hardening practices across AWS environments. Implemented secrets management exposure in pipeline configuration. Multi-cloud deployment: Deployed and configured Linux VMs in Azure and GCP Compute Engine, configuring VNet/VPC networking and IAM access — providing practical multi-cloud comparison and operational exposure alongside AWS primary workloads. Documentation & developer experience: Produced automation runbooks, CI/CD workflow documentation, and knowledge-base articles supporting team onboarding, asynchronous collaboration, and iterative process improvement across Agile delivery cycles. Agile delivery: Operated within Scrum and Kanban frameworks — managing sprint cycles, tracking CI/CD issues in Jira, maintaining backlog hygiene, and applying iterative delivery practices to

infrastructure and automation workstreams. Environment: AWS (EC2, S3, VPC, IAM, RDS, CloudWatch, ECS, EKS) · Terraform · CloudFormation · Docker · Kubernetes · Jenkins · GitHub Actions · Prometheus · Grafana · ELK Stack · Python · Bash · Linux · Jira Selected Projects Cloud Infrastructure Automation Platform — AWS · Terraform · CloudFormation · IAM · VPC Provisioned fully automated multi-tier AWS environments using Terraform — covering VPC networking, compute (EC2), IAM role policies, Security Groups, and S3 storage. Demonstrated infrastructure-as-code discipline with version-controlled, reproducible environments across dev and production configurations. CI/CD Pipeline — Build to Deploy Automation — GitHub Actions · Jenkins · Docker · Kubernetes Designed end-to-end automated pipelines covering source control integration, build, automated testing, Docker container build, and Kubernetes deployment. Pipeline included environment provisioning automation and dependency update workflows aligned with modern DevOps release engineering practices. Observability Stack Implementation — Prometheus · Grafana · ELK Stack · AWS CloudWatch · Datadog Implemented full observability stack — metrics collection, centralized log aggregation, automated alerting, and real-time dashboards. Reduced MTTR by 40%+ through automated alert routing and structured triage. Dashboards delivered actionable system health data to both engineering and non-technical stakeholders. Microservices Containerization & Orchestration — Docker · Kubernetes · Amazon ECS · Amazon EKS Containerized and orchestrated microservices architecture using Docker and Kubernetes — implementing consistent build workflows, deployment strategies, and autoscaling configuration. Demonstrated platform support skills directly applicable to production Docker-based deployment environments. Multi-Cloud Environment Deployment — AWS · Azure · GCP · Terraform · IAM · VPC/VNet Deployed and configured Linux virtual machines across AWS, Azure (VMs + VNet), and GCP (Compute Engine) — configuring networking, IAM access policies, and comparing VPC architectures across providers. Built foundational multi-cloud operational awareness. Certifications AWS Certified Cloud Practitioner (CLF-C02) — Amazon Web Services AWS Educate: Introduction to Generative AI — Amazon Web Services AWS Certified Solutions Architect – Associate — In Progress AWS Cloud Essentials | AWS Billing and Cost Management — Amazon Web Services 3MTT Data Science / Machine Learning — Federal Government of Nigeria Education Cloud Computing Certification — Ekiti MSME ICT Hub, 2026 BSc Entrepreneurship & Business Management (In Progress) — National Open University of Nigeria Additional Information 100% remote — experienced working across time zones with async-first communication. Available immediately. Open to mission-driven, AI-focused, and social impact engineering roles globally. Strong technical documentation and knowledge-sharing discipline. Tailored for Jr DevOps Engineer roles — AI & data platform engineering focus | Oluwadare Tobi Jayeola | April 2026

Baalebos AI — Optimization Report

ATS Match Score: 82.0% • 7 improvement(s) identified

Overall ATS Score: 82.0%

AI-Powered Improvement Suggestions

AI SUGGESTION

- Add Relevant AWS or Kubernetes certifications to your resume

AI SUGGESTION

- Emphasize experience working in distributed, remote-first teams

AI SUGGESTION

- Highlight background in highly distributed environments

RELEVANT AWS OR KUBERNETES C

- Add 'Relevant AWS or Kubernetes certifications' to your resume — this keyword appears in the job description and is currently missing from your resume.

BACKGROUND IN HIGHLY DISTRIB

- Add 'Background in highly distributed environments' to your resume — this keyword appears in the job description and is currently missing from your resume.

EXPERIENCE WORKING IN DISTRI

- Add 'Experience working in distributed, remote-first teams' to your resume — this keyword appears in the job description and is currently missing from your resume.

HELM

- Add 'Helm' to your resume — this keyword appears in the job description and is currently missing from your resume.
